

Technical Manual

Setup Instructions

- Extract the zip file.
 - Navigate to the EmployeeHierarchy folder for the frontend.
 - Run `npm install` to install all dependencies required to run the application.
 - Run `ng serve` to run the express server and serve the application on `localhost:4200`.
 - Open your browser to <http://localhost:4200>
-
- Navigate to the EmployeeHierarchy-API folder for the backend
 - Open the `.sln` in visual studio and run.

Technologies used

BACK END

For the backend I used a .NET 6 and SQL express.

FRONT END

For the front end I used Angular combined with Syncfusion.
